

The Climate Legislation Study:

A resource of knowledge on national climate legislation - tailored for legislators

Michal Nachmany
2017 IRENA Legislators Forum
Abu Dhabi, 13 January 2017

What would legislators need to know when formulating national climate legislation?

- A range of approaches and options for policy instruments
- Success and failure stories
- Understanding reasons behind success and failure (policy, political, and other)
- National circumstances
- Finally – to know that they are not alone, and other countries are acting on climate change

The Climate Legislation Study: an online resource on national climate legislation tailored for legislators

"The results of the 2015 Global Climate Legislation Study are encouraging... I invite legislators to take advantage of this new, powerful tool and to use it to help increase their contributions towards meeting the 2° Celsius goal."

Christiana Figueres (Executive Secretary, UNFCCC)

A searchable database containing over 860 laws from 98 countries and the EU:

National Energy Efficiency and Conservation Act 2016 (2016)

The 2016 Act replaces the Pakistan Energy Efficiency and Conservation Act (2011) and keeps driving institutional development to improve energy efficiency, specifically mandating the creation of: the National Energy Efficiency and Conservation Authority (NEECA, transformed from former National Energy Conservation Centre - ENERCON); the Authority Fund; and the National Energy Efficiency and Conservation Board. NEECA's functions include among...[read more](#)

Alternative Energy Development Board Act (2010)

The Act creates an Alternative and Renewable Energy Development Board. The text largely sets out the formal standing of the board, outlining its financial status and how to appoint members of the board etc. Specifically the functions of the board are to: – Develop national strategy, policies and plans for utilisation of alternative and renewable...[read more](#)

The Pakistan Council of Renewable Technologies Act (2010)

This Act legislates for institutional development by mandating the establishment of the Pakistan Council of Renewable Energy Technologies. The council will be responsible for promoting the development, acquisition, propagation and dissemination of renewable energy technologies. Specifically named technologies are: solar/photovoltaic; thermal, hydrogen, biogas/biomass, mini and micro hydro power; and wind technologies. The council will also...[read more](#)

Next steps: expanding breadth and depth of the Climate Legislation Study

- Expanding dataset to 160+ countries (in collaboration with Columbia Law School)
- Mapping institutional arrangements and governance structures across study countries
- Adding information on climate litigation cases (with Columbia Law School)
- Deepening analysis on effective modules of legislation and governance: what works when (and for who)
- Strengthening collaborations with legislators and legislator networks so we can provide even better resources
